

To whom it may concern,

H S Rekaris & Associates Pty Ltd and **Costa Rico Constructions Pty Ltd** were the engineers, designers and builders of the Bunker Freight Lines depot in Derrimut, Victoria. Our Derrimut depot is our primary depot, in which we have a workshop consisting of 21 service bays, workshop office facilities, amenities for 50 workshop mechanics, a truck wash bay capable of washing 2 full B Double combinations, drivers sleeping quarters, administration and refueling facilities. In addition concern and consideration for the environment was taken into account and provision was made for water recycling and catchments.

Our operation has now been up and running since 2003 and both companies H S Rekaris & Associates Pty Ltd and Costa Rico Constructions Pty Ltd have continued to provide us with ongoing support when needed.

Construction and project management of our \$6 million depot involved a close involvement between our staff and Stavros Rekaris. Throughout the year long project they listened closely to our requirements and worked hard to ensure our technical requirements aligned with engineering solutions that were both cost-effective and practical.

We have recently engaged H S Rekaris and Associates to design a new transport depot in Dubbo and have employed their services in the design of our Brisbane and Adelaide depots.

We are thrilled with our Derrimut depot and the many visits from the industry within Australia and also New Zealand have left us in no doubt that we are the envy of many transport companies. In addition our facilities have featured in a number of complimentary industry media articles. We were and continue to be very happy with the service that **Stavros Rekaris** and the companies that he represents provide to us.

Yours truly,
